
Changelog:

+ Added Bus where it seems reasonable.
+ Added unified LED symbol (Red power, Yellow data)
+ Added Buzzer logic and Buzzer
+ Added Sheet titles, Authors, Date, Revision
+ Added ESD protection on all Plugs (not sure if 3.3V is correct like that)

- Removed Overengineered Power distribution system
+ Implemented simpler Power distribution system
- Reduced Globals to a minimum, used +3.3V and +5V for voltage of parts
+ Introduced a lot of TestPoints with symbol that catches the eye fast.

* Redesigned some Symbols
* Cleaned up rubbish and wiring sphagetti

- Removed PCB for new layout. (WIP)

Notes:
-> Fan not yet updated, still a screw terminal.
-> Piezzo randomly connected to an STM Pin. Evan should check this.
-> PCB in the making.
Issue: Footprint and Model for SSD holder not present anymore @evan

20.11.2025
Switched R18 from 1k to 2.2k for equal led strength

+ Added more routing in PCB.

some rules:
USB wont power the STM32.
STM_Plug wont power the CM4
The GPIO_VREF of the CM4 needs to be STM32's 3.3V
The Lan Vin is only powered when running on Battery
Battery preferrably powers everything.

Whenever the CM4 runs, also run the LED signals AND the SSD voltage. all "core" tasks tied to the CM4.

Different Power Sources.

Fan controller

I am a fan.

fan only active when battery is connected.
Mby add an external power pin to externally power the fan for testing.

This part should be changed... implement directly a fan not this 3 pin screw terminal that I randomly found @evan

Connected to PB7

External interfaces

3v3 ext was first implemented here

IC1
STM32H7B0RBT6

Chose a Pin here please.
I chose 7 but please make sure its an actual pin evan. I just gambled.
For review: if this pin is incorrect, Im sorry. I just guessed
please let me know so that I can tell evan if it needs to be changed.

must be hirarchical lable RX,TX

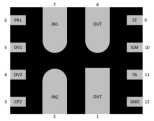

Figure 6-2. TPS2121 (RUX) Package 12-Pin VQFN-HR Bottom View

Pin Functions

PIN			I/O	DESCRIPTION
NAME	TPS2120 WCSP	TPS2121 VQFN-HR		
IN1	B1, B2, C1	7	I	Power Input for Source 1
IN2	B3, B4, C4	2	I	Power Input for Source 2
OUT	C2, C3, D1, D2, D3, D4	1, 8	I	Power Output
ST	E1	9	O	Status output indicating which channel is selected. Connect to GND if not required.
ILIM	E2	10	O	Output Current Limiting for both channels.
SS	E3	11	O	Adjusts Input Setting Delay Time and Output Soft Start Time
GND	E4	12	—	Device Ground
PR1	A1	6	I	Enables Priority Operation. Connect to IN1 to set switchover voltage. Connect to GND if not required.
OV1	A2	5	I	Active Low Enable Supervisor for IN1 Overvoltage Protection. Connect to GND if not required.
OV2	A3	4	I	Active Low Enable Supervisor for IN2 Overvoltage Protection. Connect to GND if not required.
SEL	A4	—	I	Active low Enable for IN1. Allows GPIO to override priority operation and manually select IN2. TPS2120 only.
CP2	—	3	I	Enables Comparator Operation and is compared to PR1 to set switchover voltage. Connect to GND if not required. TPS2121 only.

if the USB-only cold start "disconnects" we can try to bump SS to 470nF instead of 330nF.

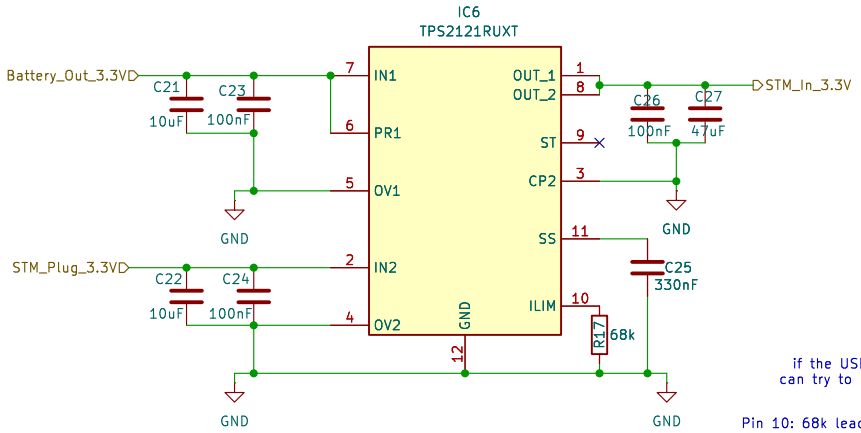
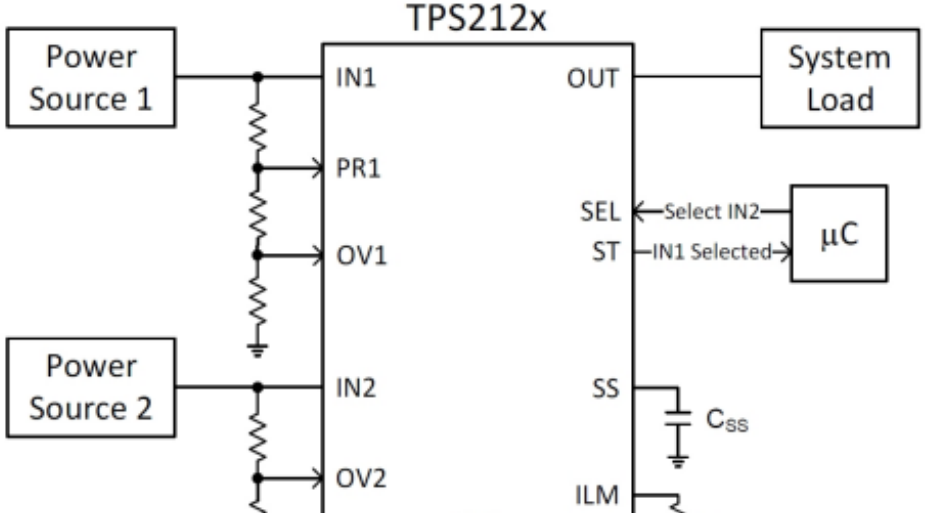
PR1 > CP2 -> IN1 has prio



if the USB-only cold start "disconnects" we can try to bump SS to 470nF instead of 330nF.

Pin 10: 68k leads to about 1.72A (should be enough for STM)

[R] = [kOhm]	22 kΩ → ~4.55 A
65.2 / R^0.861	39 kΩ → ~2.78 A
	50 kΩ → ~2.25 A
	56 kΩ → ~2.04 A
	68 kΩ → ~1.72 A
	100 kΩ → ~1.24 A



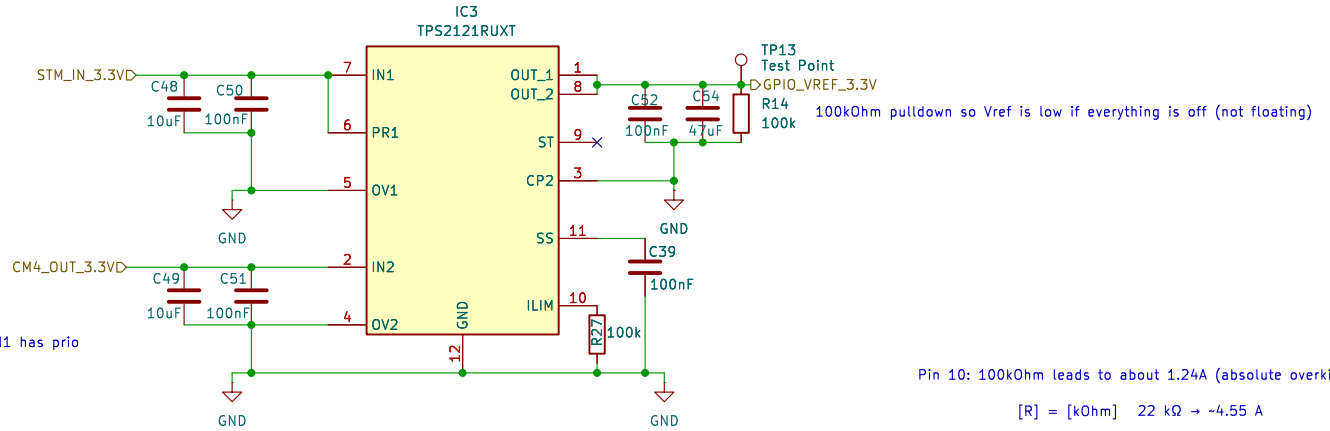
oard

_Logic/

Rev: 0

Size: A4

Id: 15/20



Pin 10: 100kOhm leads to about 1.24A (absolute overkill)

[R] = [kOhm]	22 kΩ → ~4.55 A
65.2 / R^0.861	39 kΩ → ~2.78 A
	50 kΩ → ~2.25 A
	56 kΩ → ~2.04 A
	68 kΩ → ~1.72 A
	100 kΩ → ~1.24 A

Pin SS (11): 100nF soft start cap more than enoug as virtually no load at all at vref
